[REDACTED]	27 - 56	I am suprised this has come up again as 17 years ago the proposal was deemed unsuitabe due to the high water table.
		The proposed water harvester could not possibly cope with the surface water see photo attached, The sewer as it is now can't cope properly as it is a collapsing 150mm pitch fibre in need of constant surveillance, the problem can only get worse with Climate change.
		Our property has been flooded in 2003 ,2007 and 3 times in 2008 and resulted in us having to build a new house with a floor level several feet higher. I have attached photos with dates written on them, the most recent this month
